

Expectations

- How to advance mitigation policy?
 - How implementation works, and how to learn more?
 - Understand MAPS Chile gives fruits
 - Learn how to inform the implementation
 - To learn about mitigation: change processes and policy processes
 - How to link development & mitigation efforts with adaptation, to move to sustainable development?
 - To learn what to do with the information generated so far
 - To get ideas on how to get knowledge and process into policy impact
 - To get ideas about future and next steps
 - To learn about the implementation research, and get insights about country's next steps
 - To learn how countries are approaching mitigation
 - To understand better how to address barriers are emerging for NAMA development & MRV
 - To get insights on how the results generated in MAPS will be translated into further action
 - To understand other countries experiences and methods moving into implementation
 - To learn more about the MAPS processes in other countries
 - To check what comes next? How to move forward now?
 - To identify elements for the design of allocation methods – taking into account regional, people, sector considerations
 - To understand the role of research going forward to inform implementation
 - To understand how a sector Ministry can own mitigation actions, and understand downscaling into implementation
 - To understand how other countries are solving problems – and get things done on the ground
 - To discuss how responsibilities will be allocated to implement INDC
 - To share the implementation research findings, and further internalize it
-

MAPS

Mitigation Action Plans & Scenarios

Insights Day 1

2 realities: Evidence & Implementation

Some things that seemed feasible, might not be so feasible:

- Full feasibility assessment (Erica)
- Country ownership (Erica)
- Finance model of measures (Erica)

Understanding how to prioritize:

- Funding strategy (Erica)
 - Avoiding lock-ins. Interventions of now (Emily)
-

2 approaches

ASSIGNING RESPONSIBILITIES

‘Establishing a system’

- MRV & Resgitries
- Allocation of emissions (sector-regional-company)
- Downscaling targets
- Enforcement
- Setting up priorities

IMPACTING EMISSIONS

- Barriers removal
- Mix of measures
- Project development
- Sector-based policy development
- Economic instruments analysis

Similar lessons learned from past

- Real economy
 - Legal basis (collection data; assign responsibilities/budgets)
 - Flexibility required (gradual improvements/adjustments)
 - Empowerment of other Ministries & high-level commitment
 - Different structures, different approaches (weight of SMEs, weight of AFOLU, territorial jurisdiction)
-

What are we missing?

- ▶ What are the best strategies to prioritize and/or sequence short term interventions?
 - ▶ What are the best strategies to allocate responsibilities?
 - ▶ What are the best policies and measures to tap the potential? From public sector, and from project development perspectives?
 - ▶ What is each other role moving forward? Public sector, MAPS teams, Academia
-
